

Appendix

Client Recommendations from Fifth Client Meeting on 1/5/2017:

- Shift entry selection from manual entry of alumni_id to being able to click on the table to select the entry
- Add email field to database
- Priority of the database information needs to be
 - Name
 - Email
 - Phone Number
- Add phone number field to database
- Look and Feel of the application is great

Final Client Meeting on 1/19/2017, Transcript:

- Me: Hi Mr. Cohen, I've made the changes that you requested during our last meeting, shall we go through those and make sure that the product has completed everything that it needs to?
- Client: Sure! The [graphical] interface continues to look good and I don't have a problem getting around the program. The changes you've made to the color make it much more in line with what I was envisioning.
- Me: Glad to hear, I ended up taking the color from the website.
- Client: Looks good, and I see that the [graphical] table has a higher priority on email and phone number, much better. Also, having the ability to click on the table to make a selection is much more intuitive.
- Me: Is there anything else that you can see that needs to be changed?
- Client: Not that I can see, I can enter entries in from the previous databases from CSV files and I can filter that information. The GUI is intuitive and I have an easy time getting around the application. This should help out a lot with the internship program and the scholarship fund!

- Me: Great, glad it's successful! I'll contact you about implementation and we can get the details ironed out.
